

Energy Working Group

**1st Meeting of Low-Carbon
Model Town Task Force**

**Tokyo, Japan
13 July 2010**

Criteria for the Low-Carbon Model Town Project

Any city/town/district development project (CDP) which will apply for the feasibility study (F/S) of the APEC Low-Carbon Model Town Project is expected to fulfil the following criteria.

- The CDP is coordinated or supervised by relevant government authority of the APEC member economy. It is ideal if the CDP is under cooperation with other member economies.
- Responsible entity for the CDP is identified, and the project is already on-going or has been committed being implemented.
- CDP implementation plan has been developed. The plan should include major items, such as land use plan, transportation plan, energy plan, environment plan and area management plan.
- Organization and people responsible for the F/S has been identified, and committed to provide necessary information for the purpose of F/S. Member economy may need to prepare for necessary funding and human resources for internal use.

It should be also noted that results of the APEC Low-Carbon Model Town Project will be made public, after endorsement by the EWG, through the APEC Secretariat website and other appropriate measures.
